Q: How to make commas and commas become errors in AS3? In AS3, how do I make the following sentence as an error? `var sex:Array = ["male","female"]; var age:Array = [23,25];` Edit: I want to know the solution for the following sentence as well: `var song:Array = ["hip","hop",yeremia,["hip","hop"]]` A: `var song:Array = ["hip", "hop", "yeremia", "hip", "hop"];` The comma before "hip" is a white space, which does not match the "," delimiter, so this will raise a compile error. To make the error a bit clearer you could probably use the preProcessor (old) syntax like this: `var song:Array = [preProcessor("hip", "hop", "yeremia", "hip", "hop")]`

Update I missed the Array part of the question and it seems like a mistake in the original post. But the comment from @jmr85 is the answer to your question. You could define a number of error style properties like: `as3: "errorStyle" private static const errors:Array = ["discordantComma","pointlessComma"];` or like: `as3: "errorStyle" private static const errors:Array = ["discordantComma","pointlessComma"];` or: `as3: "errorStyle" private static const errors:Array = ["discordantComma","pointlessComma`
